

ICDL

The European Computer Driving Licence Foundation Ltd (ECDL Foundation), registered in Ireland is the worldwide governing body and licensing authority for ECDL (European Computer Driving Licence) and ICDL (International Computer Driving Licence), the global standard in end-user computer skills certification.

Our considerable reputation is based on our pioneering role in identifying and developing programme content, our commitment to rigorous test design methodologies and our adherence to the highest quality standards.

Our distinctive character derives from our strong social ethos, our not-for-profit status and the unique support we enjoy from over 50 Computer Societies across the globe.

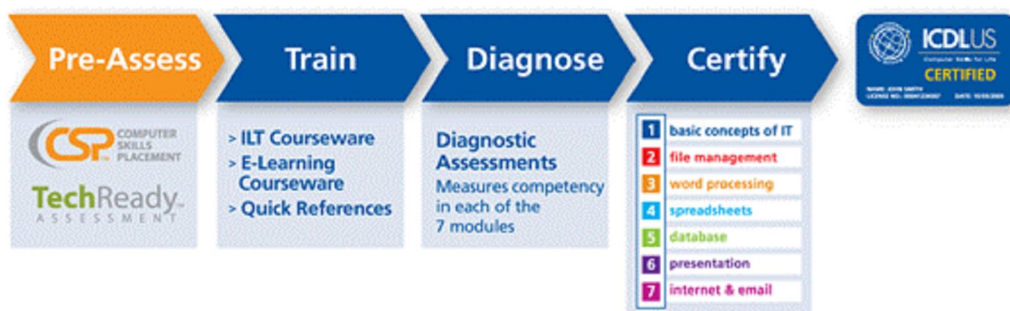

ECDL Foundation has offices in Dublin, Brussels and Singapore.

ICDL, the International Computer Driving License, is the world's leading program providing individuals with basic computer skills training and validation/certification testing.

- Over 5 million people in 140+ countries are ICDL candidates
- 15 million tests have been administered to date.
- Digital skills necessary to succeed in today's schools and workplaces are attained
- ICDL demonstrates competence and provides confidence.

In the United States, ICDL is used by schools and academic institutions, corporations, workforce investment boards, and government economic development programs to help prepare individuals for success in a world where proficient use of information and communication technology is critically important. The ICDL certification program focuses on a candidate's knowledge of basic computer skills in seven key areas that are necessary for success in today's digital world: Basic Concepts of IT, File Management, Word Processing, Spreadsheets, Database, Presentations, Communication and Information.

An Integrated Approach

As a comprehensive certification program, it includes pre-assessment tools, training components, diagnostic assessments, certification testing and administrative tools. Candidates who pass all seven module tests receive an ICDL Certification card, to be shown to prospective employers as an achievement of fundamental knowledge in all seven computer skill areas. Candidates can also earn college credit for each ICDL test successfully passed through Excelsior College, www.excelsior.edu. In addition, the ICDL program is being used in the military through the DANTES and Veterans Administration's Vocational Rehabilitation and Employment programs.

ICDL certification options

ICDL Certification can be achieved at two levels. Full ICDL Certification is awarded upon successful passing of all 7 ICDL Certification test modules. Our new Level 1 certificate is awarded after successfully passing Modules 2, 3 and 7 of the ICDL Certification Tests. Choose the path that is right for you!

Full ICDL Certification

To receive the full ICDL Certification, a candidate must take and pass all 7 ICDL Certification test modules.

Level 1 Certificate

Most basic digital skills job and academic requirements can be satisfied by completing the Level 1 certificate program. The remaining 4 ICDL modules are available as a separate supplemental package for a candidate to earn the Full ICDL Certification.
