

# SAP

Over the course of three decades, SAP has evolved from a small, regional enterprise into a world-class international company. Headquartered in Walldorf, Germany, SAP is the global market leader in collaborative, inter-enterprise business solutions. The company now employs more than 42,750 employees at sales and development locations in more than 50 countries worldwide, whose commitment and innovative spirit pace our future success.

Our global development approach focuses on distributing development across the world in strategically important markets. A global network of SAP Labs spanning Bulgaria, Canada, China, Germany, France, Hungary, India, Israel, and the United States, enables SAP to operate locally, yet organize globally.

To help you drive the most value from certification opportunities, SAP is now offering multi-tiered certification paths for specific subjects.

## Certification Level

With a focus on multi-tiered certification, you can benefit from the opportunity to advance your skills within a given subject area. In addition, employers can assign resources based on more clearly-defined benchmarks, which are mapped and validated on the basis of job tasks.

- **Associate certification** – This certification covers the fundamental knowledge requirements for an SAP consultant, ensuring the successful acquisition of broad SAP solution knowledge and skills.
- **Professional certification** – This advanced certification requires proven project experience, business process knowledge, and a more detailed understanding of SAP solutions.
- **Master certification** – This certification involves demonstrating an expert-level understanding of a specific area of SAP software and the ability to drive innovation and solution optimization through in-depth knowledge and vision. Certification at this level requires broad project experience, comprehensive SAP product knowledge, and the ability to create a future IT vision within complex project environments.

## Certification Focus Areas

These levels of certification apply to all three focus areas for which you can achieve SAP certification – application, technology, or development.

- Application certification – This certification is available for specific SAP solutions. You can take the certification exam after completing the appropriate solution academy course and case study, or the equivalent SAP standard curriculum. If you already have significant experience implementing an SAP solution, you can take the exam without completing the course work.
