

IBM Certified Solution Developer - WebSphere IIS DataStage Enterprise Edition v7.5

Acronym/Nickname

Certification Body
IBM

Description

The IBM Certified Solution Developer - WebSphere IIS DataStage Enterprise Edition v7.5 has the critical knowledge and skills necessary to professionally design and develop an efficient and scalable DataStage EE solution to a complex enterprise level business problem; configure a scalable parallel environment including clustered and distributed configurations; collect, report on, and resolve issues identified through key application performance indicators; be proficient in extending the capabilities of the parallel framework using the provided APIs (buildops, wrappers, and components).

Certification Level

Covered competencies

The qualified individual can design and develop a scalable complex solution using a minimum number of components, can precisely control data partitioning and provide for minimum data skew. This individual should also be able to configure a distributed or non-symmetric environment and should be able to tune a parallel application to determine where bottlenecks exist and how to eliminate them. The certified individual can work with complex data import and export scenarios (arrays, structures, tagged, packed, binary data, etc.) and understands the intricacies of designing parallel solutions without relying on automated insertion of partitioning and sort operations. The candidate clearly understands what an inserted buffer operation is, can enable environment variables to collect performance statistics and can determine the appropriate response to the collected data.

Requirements

Candidates must pass 1 test

(Test 415: IBM WebSphere IIS DataStage Enterprise Edition v7.5).

Recommended/Preparatory Training

Course title: DataStage Essentials for Enterprise Edition

Course number: DX434 (Worldwide)

Course duration: Four (4) days

Course abstract: The DataStage EE Essentials course teaches students how to create complex applications using standard stages. Students will gain hands-on experience by building creating jobs that might be used in typical situations. Course topics will also include DataStage standards, EE internal engine architecture, in-depth configuration options, and job control solutions.
